Response to Arguments

1. Applicant's arguments, see the Appeal Brief filed 8/23/06, with respect to claims 1-32 have been fully considered and are persuasive. The rejection of claims 1-32 has been withdrawn.

Allowable Subject Matter

2. Claims 1-32 are allowed.

3. The following is an examiner's statement of reasons for allowance: regarding claim 1, as persuasively argued by the Applicant, none of the prior art discloses in combination with the other limitations a robot system having an image processing function for determining orientation of a robot operation on one of a plurality of objects, comprising a processor to perform matching on the image data containing images of the plurality of objects captured by said first image capturing device with each of said reference models successively to select one object having an image matched with one of said reference models, and to determine orientation based on the image of the selected one object, based on said one reference model and the information of its associated capturing direction, and based on the information of the orientation of the robot operation with respect to the reference object that is associated with said one reference model. Thus claim 1 and its dependent claims 2-11, and 27-29 are allowable over the prior art. Claim 12 has similar limitations to claim 1, thus claim 12 and its dependent claims 13-22, and 30-32 are allowable for the same reasons given for claim 1.

Regarding claim 23, as persuasively argued by the Applicant, none of the prior art discloses in combination with the other limitations a method for automatically determining an arrangement of a workpiece relative to a robot, where the determined arrangement comprises at least rotational posture arrangement of the workpiece relative to the robot, the method comprising storing reference images corresponding to images of the workpiece and reference arrangement information indicating arrangements of the robot and workpiece relative to each other when the images were captured, the reference arrangements comprising rotational arrangements of the workpiece relative to the robot; and from a known arrangement of the robot, capturing a working image of the workpiece among a plurality of randomly arranged workpieces with an imaging device. Thus claim 23 is allowable over the prior art. Claims 24-26 depend on claim 23 thus are allowable for the same reasons given for claim 23.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
